Notes:

1. *The ICCC coding classification includes cases with behavior codes of /0 and/or /1 for five diagnostic groups: four in the CNS category as well as intracranial and intraspinal germ cell tumors. Registries in the United States, however, usually do not abstract these cases, as they are not malignant. These different policies may cause rates to vary slightly, so registry practices should be reviewed before making comparisons.*
2. *If no topography is specified, tumors at any site are included.*
3. *The ICCC does not consider Langerhans cell histiocytosis (histiocytosis X, Letterer-Siwe's disease) a neoplastic disease. This diagnosis has a behavior code of /3 in the ICD-O-2 and is included in the NAACCR database and publications. These different policies may cause rates to vary slightly, so registry practices should be reviewed before making comparisons.*
4. *New morphology codes introduced for cases diagnosed on or after January 1, 1995, or January 1, 1998 have been incorporated into this table. For a detailed listing of the new codes, see the SEER Program Code Manual, 3rd ed, 1998, pp 98-99.*
